# RE2 Unit 6 · 作业 2 · Unit 6A Lesson 2（精读 + 因果课后）

After 6A2 · Cause and Effect | 40 minutes | Name: _____ Date: _____
Each reading question has a **strategy label**. Your teacher marks each strategy separately, so you can see which reading action is getting stronger.

## Part A · Words — 30 marks

### A1 Retell the reading — fill the gaps — this unit — 8

constructed · shallow · occupy · brilliant · negative · released · conservation · remarkable · polluted · chemical (two are extra — watch the word form!)

Coral polyps leave behind limestone, the same material once used to build the Great Pyramids — so a reef is, in a way, a city (1) _____ by animals. Most reefs sit in warm, (2) _____ water. They (3) _____ less than one percent of the ocean floor, yet a quarter of all ocean life lives there, among the most (4) _____ colours in nature. Illegal fishing has a strongly (5) _____ effect: in one method, fishermen (6) _____ a deadly (7) _____ into the water. Still, scientists believe that with real (8) _____, coral can rebuild.

### A2 Which sentence uses the word correctly? Circle a or b. — 8

9. a. The company occupies three floors of that building. b. She occupied her lunch very quickly.

10. a. The factory releases smoke into the air. b. He released his homework to the teacher.

11. a. My brother is brilliant at hiding — I never find him. b. The sunset painted the sky in brilliant orange.

12. a. They will construct a new library next year. b. They will construct the old library down.

### A3 Write your own sentence — 8

13. Use **negative effect on** — write one true sentence (at least 8 words).

_____

14. Use **conservation** — write one true sentence (at least 8 words).

_____

### A4 Old words — Unit 3 & 4 review — 6

analyze · conduct · diverse · promote · site · ensure

15. Scientists _____ tests on the water every month.

16. A reef is one of the most _____ places on Earth.

17. New rules _____ that no boats anchor on the coral.

18. Researchers _____ the limestone layers to learn about the past.

19. The government wants to _____ tourism that does not harm the sea.

20. This _____ has been protected since 1981.

## Part B · Reading

45 marks

A new text. Read it once, then answer. Watch the cause-and-effect signals.

**The Otter and the Forest**

Off the cold coast of California grows a forest with no soil. Kelp — a giant seaweed — rises from the rocky sea floor in long brown ribbons, some as tall as a ten-storey building. Hundreds of species feed and hide inside it.

The forest has one small guardian: the sea otter. Otters eat sea urchins, and sea urchins eat kelp. For a long time nobody noticed how much this mattered.

Then, in the 1800s and early 1900s, hunters took otters for their thick fur until almost none were left. As a result, the sea urchin population grew without limit. The urchins ate through the kelp until whole forests vanished, leaving bare rock that divers later called "urchin barrens". The fish that had lived in the kelp disappeared too, and so did the crabs and the small sharks that fed on them.

When otters were finally protected, some of the kelp came back. But recovery has not been simple. In warmer years the kelp grows more slowly, so even a healthy otter population cannot always hold the urchins back. Scientists now watch three things at once — otters, urchins and water temperature — because pulling on one thread moves the whole net.

1. **Main idea** strategy: main idea — 6

What is the text mainly about?

a. how tall kelp can grow  b. how one animal's disappearance changed a whole underwater forest  c. how to hunt sea otters

2. **Cause chain** strategy: cause-effect — 8

Number these 1–4 in the order they happened.

_____ Whole kelp forests vanished.  _____ Hunters took almost all the otters.  _____ The sea urchin population grew without limit.  _____ Fish and crabs disappeared.

3. **Cause and effect** strategy: cause-effect — 7

Why did the fish disappear? Answer in one sentence — do not copy a whole sentence from the text.

_____

4. **Detail supports a claim** strategy: detail — 6

Which sentence best shows that recovery is *not* simple?

a. Otters eat sea urchins.  b. In warmer years the kelp grows more slowly, so otters cannot always hold the urchins back.  c. Kelp rises from the rocky sea floor.

5. **Vocabulary in context** strategy: guess from context 6

"…leaving **bare** rock…"  *bare* here means:

a. covered in plants  b. with nothing growing on it  c. very sharp

6. **Inference** strategy: inference 6

"…pulling on one thread moves the whole net." What does the writer mean?

a. Fishing nets damage the kelp.  b. Changing one part of nature changes everything connected to it.  c. Scientists need better equipment.

7. **Compare with what you read in class** strategy: synthesis 6

Both this text and "Cities Beneath the Sea" describe an underwater place in danger. Name **one** threat that appears in **both**.

_____

## Part C · Write 25 marks

Write a **short paragraph (4–5 sentences)** answering: **should people be allowed to hunt or collect animals that keep a habitat healthy?**

Use **one** cause-and-effect signal (*as a result · consequently · because · so*) and at least **one** word from this unit.

**Frame** — you may use it:
Idea: I think people should / should not _____.
Reason: because _____.
Evidence: For example, when the otters were hunted, _____. As a result, _____.
Close: This is why _____.

### Before you hand it in — tick what is true

- ☐ I used the target word(s) the task asked for.
- ☐ My paragraph has an idea, a reason, and an example.
- ☐ I read it once more and fixed anything that did not make sense.
