RE2 Unit 6 · 作业 4 · Unit 6B Lesson 2（精读 + 对比课后）

After 6B2 · Contrast & Fact vs Speculation | 40 minutes | Name: _____ Date: _____
Each reading question has a **strategy label**. Your teacher marks each strategy separately, so you can see which reading action is getting stronger.

Part A · Words — 30 marks

A1 Retell the reading — fill the gaps — this unit — 8

horror · confusion · victims · frightening · tempting · force · inaccurate · gather · flowing · bite (two are extra — watch the word form!)

A surfer felt his board stop and looked down at a great white. In his (1) _____ and (2) _____ he waved his arms and cut two fingers. Yet with blood (3) _____ into the water, the shark simply left. Calling great whites "man-eaters" is factually (4) _____: most (5) _____ survive. One idea is that a shark mistakes a swimmer for a (6) _____ snack. Another is that sharks (7) _____ information with their mouths — which is why they bite people with far less (8) _____ than they bite seals.

A2 Grammar of contrast — join each pair with the word in brackets — 8

9. Great white sharks are dangerous. They rarely kill humans. *(even though)*

_____

10. Great whites are often seen off Australia. Surfing is popular there. *(however)*

_____

11. The water was cold. She swam for an hour. *(despite)* — careful: *despite* takes a noun

_____

12. Bats eat harmful insects. Many people still fear them. *(although)*

_____

A3 Write your own sentence — 8

13. Use **bite with great force** or **the force of** — one sentence (at least 8 words).

_____

14. Use **gather information** — one sentence about your own life (at least 8 words).

_____

A4 Old words — Unit 2, 3 & 4 review — 6

evolve · indicate · likely · attack · basis · series

15. Slower movement may _____ that the shark is only curious.

16. Sharks _____ over millions of years into excellent hunters.

17. You are more _____ to be killed by lightning than by a great white.

18. Researchers ran a _____ of tests on how sharks see.

19. The idea has no scientific _____ at all.

20. Most so-called _____ last only a few seconds.

Part B · Reading

45 marks

A new text. Read it once, then answer. This one asks you to separate facts from what people believe.

The Sound in the Dark

For a long time, sailors told stories about a monster that groaned in the deep ocean. The sound was real: for over fifty years, listening stations picked up a low call that travelled thousands of kilometres and matched no known animal.

One of the most common explanations was that a huge unknown creature was making it. It is thought that this idea spread because the sound was so loud — louder, some said, than a ship's engine. However, there is reason to doubt it. Loudness in water does not mean size in the way people expect; a small, well-shaped body can send a very long call.

Researchers eventually matched the call to a blue whale — but one singing at an unusual pitch, higher than the rest of its species. They named it the 52-hertz whale. Some scientists believe it is a single animal that other whales cannot answer. Others think its call is simply unusual, not unanswerable, and that it may travel with a group we have not yet recorded.

Despite forty years of listening, nobody has ever seen it. Even though the story of a lonely whale has moved millions of people online, the honest scientific position is short: we know the sound is real, and we do not yet know who is making it.

1. **Best title** strategy: main idea — 6

a. How Whales Sing b. A Sound We Can Hear but Cannot Explain c. Why Sailors Tell Stories

2. **Fact or speculation** strategy: fact vs speculation — 8

Write **F** (fact stated) or **S** (speculation).

_____ The sound travelled thousands of kilometres.
_____ The whale is a single animal that others cannot answer.
_____ Nobody has ever seen the animal making the sound.
_____ The call may belong to a group we have not recorded.

3. **Speculation signals** strategy: fact vs speculation — 7

Write **two** phrases from the text that tell you an idea is *not* proven.

_____

_____

4. **Contrast** strategy: contrast — 7

"**However**, there is reason to doubt it." — What idea is being doubted, and what reason is given?

Doubted idea: _____

Reason: _____

5. **Analyzing reasons** strategy: analyzing reasons 7

The text gives **two** scientific views of the 52-hertz whale. Which one does the writer treat as still open? How can you tell?

_____

6. **Inference** strategy: inference 6

Why does the writer call the scientific position "short"?

a. Scientists have not written much about it. b. There are only two honest claims: the sound is real, and its owner is unknown. c. The sound itself is short.

7. **Synthesis** strategy: synthesis 4

"The Truth About Great Whites" and this text both correct a popular belief. In one sentence, say what the two texts have in common about *how* they do it.

_____

Part C · Write 25 marks

Write a **paragraph (5–6 sentences)** answering: **why do frightening stories about animals spread more easily than the facts?**

Use **one** contrast signal and **one** speculation phrase (*it is thought that · some believe · perhaps*), plus at least **two** words from this unit.

Frame — you may use it:
Claim: I think frightening stories spread because _____.
Reason 1 + evidence: For example, _____.
Reason 2 + evidence: _____.
Other side: However, some believe _____.
Close: In the end, _____.

Before you hand it in — tick what is true

□ I used the target word(s) the task asked for.
□ My paragraph has an idea, a reason, and an example.
□ I read it once more and fixed anything that did not make sense.
